Design management

We specialise in providing design management services to contractors, consultants and clients. We lead multi-disciplinary teams through project gateways from concept through to construction. Our portfolio has included acting as lead design manager on £20m-£130m civil & military projects.

NEC4 project management

Principal consultant Martin O'Connell is an NEC4 accredited project manager (NECReg) and a Fellow of the Institution of Engineers Ireland (CEng FIEI). We can fulfil the role of NEC Project Manager or undertake delegated project management duties as required by the contract.

Contract administration

The assessment, response and management of early warning notices and compensation events can be complex and time consuming. We undertake the management of this for contracts or subcontracts.

Dispute resolution

We provide expert opinion on contractual matters covering both design and construction. We can independently assess claims prior to adjudication or assist in the preparation of statements of case.

Tender services

We provide bid writing services to contractors and consultants. We also undertake value engineering assessments and prepare and deliver specialist presentations during client evaluation processes.

Airfield planning

We develop concept designs for airfield developments including aprons, stands, hangars, EMAS and runway extensions. We are experienced in ICAO, EASA, FAA & a range of military standards.

Consulting

Our industry knowledge gives us unique insight into aircraft performance, airport management, future technology & infrastructure requirements.

Market research

With an in-depth knowledge of design, construction and materials, we can assist finding a market for your product within the aviation industry.

Testimonials

Martin embraces strong engineering attributes, built on his innate analytical competence and meticulously-developed design and managerial skills. I worked with him in academia, where he patiently built up a deep appreciation of fundamental engineering principles, before honing his analytical skills as a valued research colleague. We have maintained contact since then, while he has built up his specialist design and contracting expertise in aviation infrastructure. The dynamic world of aviation requires professionals who passionately combine vision with practicality at the boundaries between science and art. The company Martin O'Connell and Associates is built on these solid foundations, with inspiring leadership.

Mark Richardson, Professor Emeritus, University College Dublin.

I worked with Martin on a very complex RAF project. Martin was the lead design manager over seeing a multi discipline structure. Martin shows great leadership qualities which were evident in the way the whole design process was structured and implemented. The team ethos that Martin built was true testament to his passion in the construction industry.

It has been a real pleasure working with Martin and look forward to work on the next challenging project again.

Rob Anderson, Senior Project Manager at Imtech Engineering Services Central

I had the pleasure of working with Martin at RAF Marham on a large infrastructure update and new build. His knowledge of the program and leadership were evident from the beginning. His ability to collaborate with a large and diverse team had an indelible impact on the success of the project. I am honored to have worked with Martin and would absolutely do so again. Martin is a true professional whose soft skills are "off the charts" and is head and shoulders above others that I have worked with in the past.

Sean Chaplin, F-35 Senior Sustainment Manager at BAE Systems
